Title: "Recent Developments in Semiconductor Detectors for High-Energy Photons"

Abstract: New materials, signal acquisition methods, and simulation codes are leading to advances in semiconductors detectors used in x-ray and gamma-ray systems. We discuss some recent work in our laboratory that’s helping to address long-standing questions regarding determining depth of interaction and what to do about fluorescence.

Bio: Lars R Furenlid is H.H. and C.C. Barrett Professor of Optical Sciences for Cancer Imaging and Professor of Medical Imaging. He has been at the University of Arizona for 24 years; before that he was a Physicist at the National Synchrotron Light Source at Brookhaven National Laboratory. He was educated at the University of Arizona (BS, 1983) and the Georgia Institute of Technology (PhD, 1988).
