

OPTI 435/535

Final Project

The final project for the class is based on the review of patents we did in class. Identify a patent that is related to an ophthalmic technology and read it.

Create a 5 minute video that creates a summary of the technology covered in the patent. View this as an exercise in disseminating information to your co-workers. You want to highlight the key points of the technology, describe what its potential benefits and/or likely pitfalls are. Feel free to use props, white board, or slides to make your case.

Videos should be uploaded to D2L by the end of the day on December 8, 2021.
